The AireWellness Certification Program

We care about the air you breathe

**That's why we offer the
AireWellness Certification Program.**

Indoor air quality is more important than ever. But it's an invisible problem. AireWellness Certification helps you make informed decisions about where you choose to live, work, and play, while ensuring that the air you breathe is safe.

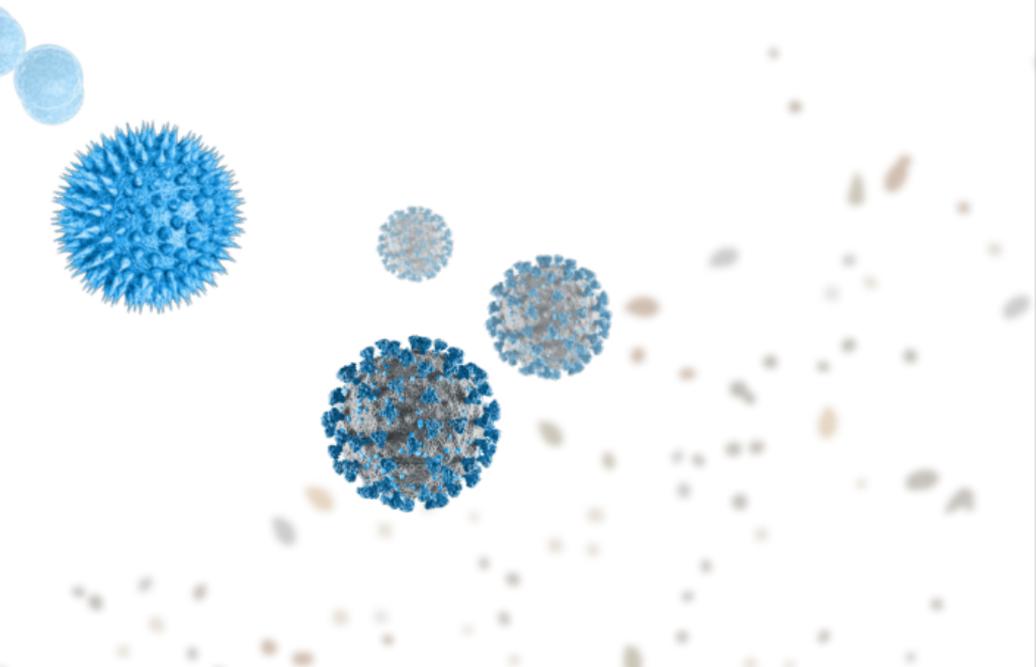

Indoor Air Can Be Dangerous to Our Health

According to the EPA, Americans spend 90% of our time indoors, where concentrations of some pollutants are two to five times higher than outdoors and more likely to be inhaled.

Pollutants include:

- Viruses
- Bacteria
- Fungi
- Volatile Organic Compounds (VOCs)
- Particulate pollutants

These particles can cause health problems including diseases, heart attacks, and strokes. To keep you safe and healthy, we're committed to removing these particles from indoor air.

AireWellness Certification Provides Peace of Mind

You can earn the AireWellness certification by installing SecureAire's medical-grade air purification technology called ACTIVE Particle Control (APC)™.

With this cutting-edge technology, you can expect a significant reduction in fine and ultrafine particles – including viruses, bacteria, fungi, and VOCs – in the air you breathe indoors.

Studies Show Efficacy of Air Purification System

ACTIVE Particle Control (**APC**)™ Technology has been scientifically proven to:

- **Be more effective than HEPA filters** – In a side-by-side scientific study, APC was shown to be more effective at removing dangerous particles than HEPA filters.
- **Reduce hospital infections by 45%** – In the first real-world study of its kind, APC was used in a hospital setting to filter out dangerous particles and reduced health-care-associated infections by 45%.
- **Reduce Dangerous Particles by up to 99% in small spaces** – In a study conducted on air quality in elevators, APC was found to reduce airborne pathogens by 77-99% when compared with traditional ventilation systems.
